## MEDIA CRITIQUE

Society have different opinion about the women, different period and different people have their own opinion between skinning women and fat women. The media hurts a lot of women in the society, because they always post someone's privacy and show women as sex objects to force people to look at ads, and read the information. One piece of media that supports this idea is a picture; the picture compares how the society describes the skinning women and a fat women. The other picture is about a women's face, which was hurt by a man. This piece of media shows how society common a women's base on their personality; superficial; self-confident; behavior and appearance.

The first reason the piece of media hurts is they compare a skinning women and fat women with a naked body. According to the picture, the media use the word "Mean" to describe skinning women and use the word "Nice" to describe fat women. This means the skinning women always act and seem to be meaning to everyone. In ancient china people usually say " women are poison" because the skinning women have a beautiful appearance, no matter how they mean, there still has people to protect them. According to the picture, when the cameraman photographer taking the photo, the skinning women was look at the fat women, seem like something on the fat women's face. This means the skinning has to take care a lot, they has to

observe the thing around them very careful, cause they don't want someone to steal their thunder. So, society say "women gets jealous easily" and "run after perfection" the skinning women always want the perfect things, they like to compare them-self to the other, but the fat women don't care about this. As you can see the media hurt the women by how they describe and compare the women.

The second reason is this piece of media hurts women, they post the picture about a women get hit by a man. According to the picture, it shows a women's face was red, it seems like get hit by someone else. Her husband, she getting hatred all the man, hit this means the women, because she doesn't believe on men anymore. According to the picture it says "REAL MEN DON'T HIT WOMEN." this means if the men love his wife, he would not punish his wife, because a good men don't hit a women and hit women's man is not a good men. Also hit women's men are not a human. As you can see if the men wants to hit a women, it can shows that the man have some problem in he head.

Others may say the media helps the women, because they say hitting the women is a criminal act. According to the picture there says, " Real men don't hit women" in the base say "like if you agree" this means the media was protect the women. They help out those women who let their husband hit and do nothing. However, this is not true because most of the women didn't want their thing to be post in a different position. In the early china people always use " Don't air or wash your dirty linen in public" to describe it. As you can see the media use the word " help" but in the other way to think this, it was hurt the women, because when people have the bad opinion on a women, the women will have no reason to live in the world. As you can see

women is very pay attention to their appearance and privacy security.

This piece of media shows how a society common women and what they pay attention on. One reason is the fat women is established in a good way, because fat women always be nice to each other, but skinning women is established in a bad way, people think the beautiful women is poison, they have a beautiful appearance and inside is a wicked wild women. Other reason is dominant; they have a pretty appearance to attract the attention from men. A final reason is women very pay attention to their appearance and privacy security. It is important to analyze the effects of the media, because the media has no emotion, they has no respect, no regard for anyone's feeling to post the others privacy to help the career development of them-self. This connects to the media today because most of the media still post the privacy from the others, the media want to have more attention so they need more information from the others to help them, but I think it doesn't work, if you want more attention, you can find something from the natural world.
